ORACLE E-BUSINESS SUITE

How to manage the complexity of the processes that characterize a modern healthcare business? How to identify the critical to activate the appropriate action for improvement? Oracle, the world leader in technologies and systems for e-business and decision support, has the answer to these questions: it is called e-Business Suite for the Swiss healthcare that, thanks to the advice and experience from Omnisoft in the Swiss healthcare system is based on a standard business model for the Swiss healthcare. Oracle E-Business Suite for the Swiss healthcare, is in fact the range of solutions specifically designed to help health managers to streamline processes with advanced methodologies ERP (Enterprise Resource Planning), to assess the financial and operating performance of the facility and decide on the most appropriate actions to bridge the gaps between forecasts and actual results. Widen the view, Oracle e-Business Suite for the Swiss healthcare is only one piece of a complete solution for companies that Oracle offers all over the world with over 14000 installations.

IDENTIFYING THE DRIVER costs and revenues

Oracle E-Business Suite for the Swiss healthcare is the best tool to optimize the management of integrated financial accounting and bookkeeping clients, suppliers and orders: accounting and other records, schedule and compensation customers and suppliers, accounting and budget

commitments, budgets, balance sheet and income statement in accordance with statutory criteria, cases economali, etc. .. In addition, the analytical accounts, according to the dimensions of analysis applicable to the system of accounting records, non-accounting (not a newspaper) and statistics (such as number of employees, stays, hours of operating room, etc. ..) allows management to gain full visibility on the drivers of costs and revenues and promote a higher level of efficiency.

Checking over the company

The native ability of the system to handle multiple companies belonging to the same financial group allows, in addition to the preparation of consolidated financial statements, to obtain management and analysis of costs and revenues of the group.

ACCELERATING THE PROCESS budgeting

The formulation of the budget is a key factor for rationalization and efficiency because of the clear definition of objectives is a prerequisite for the accurate verification of the results. With Oracle E-Business Suite for the Swiss healthcare the budgeting process is accelerated by a set of specific functions: formulation of the budget from a budget or actual balances from previous years; budget allocation entries using formulas defined by the company. You can also perform allocation by department, by division or department, using predefined formulas or set general budget control budget of detail, with visualization of the budget that exceeds the control limits.

“Vertical specialization, Oracle e-Business Suite for Swiss healthcare incorporates procedures and established models and successfully applied”

MANAGE EFFICIENTLY patients, health insurance and doctors

The centrality of the system patient / guarantor / health insurance and the services provided are the key of the Oracle E-Business Suite for the Swiss healthcare. The management of the acceptance, both for admission and for day hospital allows simultaneous identification of insurance status of the patient, the treatment and display of historical performance and accounting position.

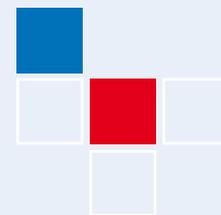

In addition, the ability to define performance and cost catalog groups according to the conventions of each health insurance, following types of costs in lump sum, or fixed DRG and definition of the margins of reimbursement for each specialist who intervenes on the patient, and the management of patients autopaganti treatment or quotas difference, combined with the compliance of the rules and their evolution, flexibility in the management of all the circumstances. The compliance with the rules and base DRG is satisfied in the drafting of bills for each recipient (Health Insurance) and sending health data for statistics. The benefits provided and the drugs administered to the patient during the hospital stay are drawn by staff and may enter through automated procedures as detailed or as a lump sum in the definition of the invoice. An indication of the treatment provided contributes to the definition of the cost of the medical personnel inside or outside, in drafting automatic summary reports or invoices, with procedures for the calculation of the payment subject to condition.

The acquisition of file collection by health insurance is automatically managed, providing detailed visibility or the aggregate of the cash collection forecasts or discovered. The structuring of the system converges into a single data base and clinical health data and analytical accounting management analysis allowing consistent and thorough.

PLANNING AND MONITORING shifts of personnel, resources and patients

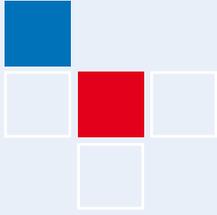

How to reduce the time spent each month by the department responsible for the planning of personnel shifts, how to handle the proper use of resources such as gyms, swimming pools, instrumentation, etc. .. with the patient and staff? How to obtain a final accounting entries to spread the cost of staff and facilities and patients on the centers actually use?

With the add-on solution for Oracle E-Business Health you can make the regular staff scheduling algorithms with sophisticated and customizable that take into account all the possible contractual forms and service provided for each type of profession and department, while respecting the constraint, compared shifts, night, leave, weekends, etc.. The resource planning and instrumentation in addition to providing an agile operational tool for reservations, assigns overhead costs and personnel according to the actual usage.
